Research Interests

I'm interested in designing and building **wearable and soft-robotic systems that restore and augment human movement**. I am drawn to the full loop from human intent to physical assistance, and I work across **wearable haptics, embedded sensing, soft actuation, and digital fabrication**. My approach is hands-on and human-centered: I prototype real hardware and evaluate it with the people it is built for. Looking ahead, I want to extend my research toward **assistive and rehabilitation wearables and exoskeletons**, and toward closing the loop between neural intent and adaptive wearable assistance.

Education

2025 – Present | **Graduate Student, Computer Science — The University of Texas at Dallas**
Design & Engineering for Making (DE4M) Lab, advised by Liang He.
M.S. in Computer Science (Interactive Computing) expected **Spring 2027**.

2021 – 2025 | **B.A. in Computation and Design — Duke Kunshan University**
Dual-degree program with **B.A. in Interdisciplinary Studies, Duke University**.
Undergraduate research advisor: Xin Tong.

Publications

2026 [E.1] ***Yili Wen**, Yafei Ge, Xin Tong, Liang He. "PufFab: Making Shape-Transformable Rice Paper for Playful Food Fabrication." (Work-in-Progress). *ACM TEI 2026.*

2026 [W.2] ***Yili Wen**, Ceci Verbaarschot, Liang He. "From Intention to Action: An Invasive BCI-Driven Wearable Framework for Everyday Hand Assistance in SCI Patients." (Workshop paper & poster). *Everyday Wearable for Personalized Health and Well-Being Workshop, ACM CHI 2026.*

Manuscripts In Preparation

– ***Yili Wen**, Ceci Verbaarschot, Liang He. "A Soft Grasp-Assist Exoskeleton for Spinal Cord Injury: Design and Intent-Driven Control." In preparation; targeting *IEEE Robotics and Automation Letters (RA-L).*

– ***Yili Wen**, Liang He. "Sequential vs. Simultaneous Skin-Stretch Cueing for Guiding Blind and Low-Vision Runners." In preparation; targeting *ACM IMWUT* (Nov. 2026 cycle).

– Tianjian Liu, Jingwei Sun, **Yili Wen**, Haiqi Shen, Liuxin Zhang, Yu Zhang, Qianying Wang, Xin Tong. "Human–AI Co-Writing in Knowledge-Intensive Tasks: Behaviors, Challenges, and Collaboration Patterns." In preparation; targeting *Int. J. Human–Computer Interaction (IJHCI).*

Selected Research Projects

2025 – Present

Soft Grasp-Assist Exoskeleton for Spinal Cord Injury **(“From Intention to Action”)**
A wearable soft exoskeleton that restores grasping to people with spinal cord injury, driven by the wearer’s own decoded intent.

- Designed soft pneumatic finger actuators (printed silicone using Form4B) and a layer-jamming wrist brace for stable, compliant grasp assistance during everyday tasks.
- Built the embedded control and pressure-sensing stack, and a neural-intent (BCI) pipeline that turns decoded intention into adaptive assistance.
- Ground the design in real rehabilitation needs through a co-design study with clinicians.

2025 – Present

Haptic Wearable for Blind & Low-Vision Runners
A body-worn haptic system that guides blind and low-vision runners through turns and hazards without relying on audio.

- Built a belt of distributed skin-stretch actuators that deliver directional cues on the body, paired with on-device vision and a companion iOS app.
- Investigating a novel guidance mechanism — **sequential (cranio-caudal) vs. simultaneous** cueing — evaluated in the field with blind and low-vision runners.

2025

PufFab: Shape-Transformable Rice Paper for Playful Food Fabrication **(TEI ’26)**
A design-to-fabrication pipeline for edible materials that morph from flat prints into 3D forms.

- Modified 3D-printer hardware and built the toolchain to print 2D patterns that transform into 3D structures when fried.

2024 – 2025

Adaptive Game-Controller Hardware for Upper-Limb Motor Disabilities **(GI ’26)**
DIY, reconfigurable game controllers that let players with upper-limb motor disabilities shape the input to their own body.

- Designed and fabricated the modular, remappable controller prototypes that served as the physical platform for the user study.
- Co-authored the resulting poster (Graphics Interface 2026), which studied player experience and narrative-inquiry methods around this platform.

2023 – 2024

WooGu: Tangible System for Children’s Agricultural Literacy **(IDC ’25)**
An educational tangible system that teaches children about farming through hands-on, multi-sensory interaction.

- Designed and built the system, pairing 3D-printed farming tools with embedded sensors to give visual, haptic, and digital feedback.

Research Experience

2025 – Present

Research Assistant — Liang He
Design & Engineering for Making (DE4M) Lab, UT Dallas, USA.

2023 – 2025

Research Assistant — Xin Tong
HCI Lab, Duke Kunshan University & Information Hub, HKUST (Guangzhou), China.

2023 – 2025

Research Assistant — Karen Cochrane
Embodied Computing Lab, University of Waterloo, Canada.

2022 – 2023

Research Assistant — Fan Liang
Center for the Study of Contemporary China, Duke Kunshan University, China.

Teaching & Outreach

Summer 2026

Instructor — TAST STEM Bridge Summer Camp
Department of Computer Science, UT Dallas. Six-week camp (June–July 2026); designed and delivered hands-on lectures and build sessions.

Summer 2026

Instructor — CS Outreach Summer Camp
Department of Computer Science, UT Dallas. June–July 2026.

Spring 2026

Teaching Assistant — CS 4376 Object-Oriented Design
Department of Computer Science, UT Dallas.

Fall 2025 — **Teaching Assistant — CS 6326 Introduction to Human–Computer Interaction**
Department of Computer Science, UT Dallas.

Technical Skills

- **Fabrication & Prototyping:** soft-robotics fabrication (silicone molding/casting), SLA (resin) & FDM 3D printing, OpenSCAD / CAD, laser cutting.
- **Electronics & Embedded:** ESP32, Arduino, soft pneumatic actuation & control, brushed DC motor control (H-bridge drivers), closed-loop encoder feedback, I^2C sensor integration, ESP-NOW wireless mesh.
- **Machine Learning & Vision:** PyTorch, YOLO / Ultralytics (custom object-detection training), Core ML on-device deployment, OpenCV.
- **Programming:** Python, C/C++ (embedded), Swift/SwiftUI, JavaScript/p5.js, Java/Processing, R.
- **Design & Analysis:** Figma, Blender, statistical analysis in R.
- **Research Methods:** controlled & field user studies, mixed-methods, qualitative coding, sensor-data analysis.

Presentations

Apr 2026 — **Poster & Talk — "From Intention to Action: An Invasive BCI-Driven Wearable Framework for Everyday Hand Assistance in SCI Patients"**
Everyday Wearable for Personalized Health and Well-Being Workshop, ACM CHI 2026, Barcelona, Spain.

2026 — **Talk & Poster — "PufFab: Making Shape-Transformable Rice Paper for Playful Food Fabrication"**
ACM TEI 2026.

2025 — **Paper Presentation — "'I Want to Use Technology to Help Farmers in the Future'"**
ACM Interaction Design and Children (IDC) 2025.

Awards

2023 — **Center for the Study of Contemporary China (CSCC) Fellowship**
Duke Kunshan University.

2022 – 2024 — **Dean's List**
Duke Kunshan University (Fall 2022, Fall 2023, Spring 2024, Fall 2024).
